

FIRST, CHECK YOUR FABRY!

FIVE QUESTIONS

to discuss with your doctor

1. How is your pain? Do you experience episodes of extreme pain in your hands and/or feet of unknown cause?
2. Do you have frequent tingling in your hands and feet?
3. Do you frequently have gastrointestinal problems such as pain and bloating after eating, or nausea, cramps, or diarrhea?
4. When was the last time you had your blood drawn to measure your GL-3 or Lyso-GL-3 levels?
5. Have you recently visited any specialists (such as Cardiologist, Nephrologist, Neurologist, GI doctor)? Did they perform any tests or talk to you about your results?

YOU DON'T HAVE TO GO THROUGH IT ALONE.

CareConnectPSS® is here to help.

sanofi

Gigi and her son, Luke,
living with Fabry disease

- Dedicated CareConnectPSS Case Managers and Patient Education Liaisons
- Events to help connect you with other people living with Fabry disease
- Disease-specific information and resources
- Genetic education, information on testing and diagnostics
- Care coordination for treatment
- Help with handling insurance issues
